

- CS connects to our SPI Chip Select pin. We'll be using Digital 4 but you can later change this to any pin
- RST connects to our radio reset pin. We'll be using Digital 2 but you can later change this pin too.
- G0 (IRQ) connects to an interrupt-capable pin. We'll be using Digital 3 but you can later change this pin too. However, it must connect a hardware Interrupt pin. Not all pins can do this! Check the board documentation for which pins are hardware interrupts, you'll also need the hardware interrupt number. For example, on UNO digital 3 is interrupt #1
